Filipino Citizen | (+63)9299647407 | joshidanbosi02@gmail.com | linkedin.com/in/idan-josh-bosi | github.com/jxsh2

PROFESSIONAL SUMMARY

Aspiring web developer with practical experience in React.js, Next.js, and Semantic UI React through internship and academic projects. Eager to apply UI/UX principles to create responsive, accessible, and user-centered digital interfaces. Passionate about learning and growing in building seamless web applications that blend design and functionality.

EDUCATION

Polytechnic University of The Philippines

Sta. Mesa Manila, Philippines

Bachelor of Science in Computer Science

September 17, 2025

- **Latin Honor:** Cum Laude
- **Relevant Coursework:** Web Development, Human Computer Interaction, Software Engineering 1 & 2, Applications Development and Emerging Technologies, Technical Documentation and Presentation Skills in ICT

SKILLS

Programming Languages: Python, C, SQL, HTML/CSS, JavaScript

Frameworks & Tools: React JS, Next.js, SCSS, Semantic UI React, MySQL, Firebase, MongoDB, Figma, Canva

EXPERIENCE

Zynappse Corporation

Pasig City, Metro Manila

Web Developer Intern (Remote) | React JS, Next.js, Semantic UI React, and Sass

Aug 2024 – Sep 2024

- Completed a 200-hour internship focused on front-end web development.
- Developed solo front-end projects, including a personal portfolio website and a news article platform, using React.js, Next.js, SASS, and Semantic UI React.
- Strengthened front-end development skills through independent project implementation and practical training.

PROJECTS

DermaScan – Thesis | Python, Pytorch, React JS, SCSS, Jupyter Notebook

March 2024 – March 2025

- Developed a full-stack facial skin disease classification web application, integrating a React.js front end with a Python-based AI/ML backend.
- Designed and trained a hybrid deep learning model (AlexNet + XGBoost) for real-time skin condition detection.
- Built a responsive, user-friendly multi-page interface using React.js and SCSS, ensuring smooth navigation and accessibility.
- Implemented backend services in Python to support real-time inference and seamless front-end integration.
- Conducted model evaluation and optimization in Jupyter Notebook to enhance system performance and reliability.

Website Portfolio – Internship Project | Next.js, SCSS

Aug 2024 – Sep 2024

- Created a responsive Next.js Single-Page Application (SPA) portfolio showcasing personal projects and skills.
- Applied modern UI design principles to deliver a clean, minimal, and accessible interface.
- Implemented SCSS modules for scalable and maintainable styling.

VCT Dispatch – Internship Project | React JS, Semantic UI React, SASS

Aug 2024 – Sep 2024

- Developed a React-based Multi-Page Application (MPA) news platform with a structured and intuitive layout.
- Utilized Semantic UI React components to ensure consistency, responsiveness, and modern aesthetics.

CleverCash – School Project | MERN, React JS, MongoDB, CRUD

2023-2024

- Developed a full-stack financial management site using the MERN stack.
- Implemented CRUD functionalities to manage user financial records dynamically.
- Integrated MongoDB for secure and real-time data storage and retrieval.
- Focused on a clean and intuitive UI to make budgeting and expense tracking user-friendly.

PUPAFID System – School Project | HTML/CSS, JavaScript, Firebase

2023-2024

- Developed a full-stack site to digitize the university's ID replacement and ticketing process.
- Developed the front-end interface with HTML/CSS and implemented Firebase and JavaScript backend for real-time data storage and authentication.
